Abstract— As we see over this time there are so numerous people who want their own business, there are numerous applications for online shopping like groceries, clothes and so on. The purpose of this project is to give services for clients and growers for online shopping of fruits and vegetables. It's ideal is to save the clients time and so they can do all the necessary shopping through computer or electronic machine without moving from one place to other. We've created this website so that clients can have fresh fruits and vegetables. Also, in this we give services like online delivery, stock managing, online payment. It's easy to manipulate and enter that is, it's in simple language that's accessible for the client and also effective to use. In this it also shows the information and description of fruits also keep information of deals done and cash conservation bills details. Also provides colorful searching content orders like fruits, sale or new stock. Also, it's effective because it gives fast delivery. This analysis provides wisdom for marketing directors and retailers with respects to buying conduct in the fruit and vegetables.

Index Items- Website, Live Fruits and Vegetables system, Online Payment, Live Dashboard.

I. INTRODUCTION.

The “E-Shop Fruits and Vegetable Store” has been developed to stamp the problems prevailing in the rehearsing homemade system. This website is supported to exclude and, in some cases, reduce the rigors faced by this being system. also, this system is designed for the particular need of the company to carry out operations in a smooth and effective manner.

The website is reduced as important as possible to avoid offenses while entering the data. It also provides error communication while entering invalid data. No formal knowledge is demanded for the stoner to use this website. therefore, by this all it proves it's stoner-friendly. E-Shop Fruits and Vegetables Store, as described over, can lead to error free, secure, dependable and fast administration system. It can help the stoner to concentrate on their other conditioning rather to concentrate on the record keeping. therefore, it'll help association in better application of coffers.

Every association, whether big or small, has challenges to overcome and managing the information of stocks, fruits, vegetables, client, bill, payment. Every online Fruits and Vegetable Store has different fruits and vegetables needs; thus, we design exclusive worker operation system that are acclimated to your directorial conditions. This is designed to help in strategic planning, and will help you insure that your association is equipped with the right position of information and details for your future ambitions.

II. LITERATURE REVIEW

1. **MANAGING FRUITS AND VEGETABLES INVENTORY: A STUDY OF RETAIL STORES, South Asian Academic Research Journals, South Asian Journal of Marketing and Management Research, Aug 31, 2015**

Selling fruits and vegetables as perishable items need special consideration by retailers keeping in mind different inventory management conditions which should cater to the need of the customers. As shelf life of fruits and vegetables are less therefore strategies for review, replenishment needs to be devised correctly. Also managing and ordering such perishable products needs to be taken special care by the retailers so that customer satisfaction can be achieved with less waste. This paper presents a review and replenishment techniques followed by the retailers of perishable items (fruits and vegetables). Also ordering policies followed by them are discussed. How retailers manage their order size, time of order, how do review and replenish their shelf etc.

Vegetable consumption is also rising, reflecting the consumer's increased income, desire for diversity, and awareness of nutritional benefits. At the same time, consumers have a rising concern with product safety issues. Traditional marketing practices are giving way in developing countries to the more modern practices of the developed countries: supermarkets, long-distance shipping, international marketing, various processing and packaging practices, safety and quality standards, constant product supply, and product diversity. These changes have increased pressure on traditional, small, and poor farmers to keep up, with the requirements of good seed, efficient practices, hiring help beyond the family, market awareness, and the ability to provide safe and high-quality vegetables.

3. Factors Influencing the Purchase Intention in Online Organic Fruit and Vegetable Stores, November 2018, Jurnal Manajemen dan Agribisnis 15(3), DOI:10.17358/jma.15.3.209

The increasing number of organic agricultural production and public awareness toward healthy living provide the opportunities in trading for the products itself. Meanwhile, the development of information technology produces innovation such as electronic commerce (e-commerce), and in agribusiness, it is known as e-agribusiness. E-agribusiness allows organic groceries trade activities to be conducted online through a website. However, that is a new and rare activity in Indonesia, therefore the management of company needs to develop the strategy to enhance the customers and survive in the industry. The purpose of this study is to analyze the factors influencing organic fruit and vegetable purchase intention through a website based on technology perspective and consumer behavior.

4. Online Fruit & Vegetable Shop management Prof, Vol-7 Issue-1 2021, IJARIE-ISSN(O)-2395-4396

This paper proposes the concept of the online shop of Fruits and vegetables. In the store there is huge number of vegetables and fruits they get in contact with many things which can harm their freshness and hygiene. From our observation we can conclude that vegetables and fruits are directly handled by the customers before buy the specific product & not at just one time it will repeat itself as per the customers get increase. Vegetables and fruits are taken as per the climate of the specific area that is useful and good for the respected product that is we are going to have. vegetables and fruits play main role in the diet, so because of online shopping of them their hygiene get maintained.

5. Retailing and branding of vegetables and fruits: an exploratory study, Pranjana: The Journal of Management Awareness, July- Dec 2010, Vol 13, No.2, indianjournals.com, Jan 1, 2010

Global trends have important implications for Indian retailers. These drawbacks or the present opposition / challenges present opportunity to international and/or professionally managed Indian corporations to pioneer a modern retailing industry in India and benefit from it. Retail market in India offers an opportunity for a large player to build a Rs40,000-crore retail business spanning multiple categories by 2015 (at current prices). Retailers that invest in training will be able to ensure the availability of quality manpower in a rapidly growing market & will be able to utilize the opportunity. Retailing of Vegetables and Fruits with brand names is still a growing field of research in Indian context and lot of scope of detailed conclusive research is there in this area.

III. PROBLEM ANALYSIS AND LIKELY BENEFITS BASED ON LITERATURE REVIEWS

There may be other fruit shops online or in the local area that offer similar products, which can make it difficult to stand out and attract customers. Depending on the region, certain types of fruit may only be available at certain times of the year. This can lead to inventory issues and make it difficult to consistently offer a wide variety of fruit to customers. Shipping perishable goods like fruit and vegetables can be challenging, as it needs to be done in a way that preserves the quality and freshness of the product. The online shop may need to implement measures to ensure that the fruit is fresh and of high quality when it is shipped to the customer. As with any online shop website or business, there may be concerns about payment security and the potential for fraud. The fruit shop will need to ensure that they have secure payment systems in place to protect both their business and their customers.

OBJECTIVES: -

- ✓ To manage the details of Fruits and Vegetables, Customer, Order, Transaction, Payment.
- ✓ It manages all the information about Fruits and Vegetables, stocks, Payment, Vegetables.
- ✓ The project is totally built at administrative end and thus only the administrator is guaranteed the access.
- ✓ The purpose of the project is to develop a website to reduce the manual work for managing the Fruits, Vegetables, Customer, Stocks, Order.
- ✓ It tracks all the details the Order, Transaction, Payment.

IV. METHODOLOGY USED

❖ Analysis-specify modules:

The FOUR Modules of the Project:

- **Module-1: Home page**
 1. Home
 2. About
 3. Shop
 4. Contact
 5. Blog
 6. Login
 7. FAQ
- **Module-2: Customer User Module**
 1. Login
 2. User dashboard
 3. View products
 4. View recommended
 5. Payment mode
 6. Logout
- **Module-3: Supplier User Module**
 1. Login
 2. Supplier user dashboard
 3. View products
 4. View Recommended
 5. Payment mode
 6. Logout
- **Module-4: Admin Module**
 1. User View
 2. View all sells products
 3. Feedback reports
 4. Add fruits and vegetables

V. PLACE OF WORK AND FACILITIES AVAILABLE / REQUIRED

We did the project through our resources in the college laboratory and the company also helped us execute the website in accordance with requirements and changes time to time. Because of that we easily get to know about their Products and the stories of some Products, Customer to describe in a website and make some creative contents to make website.

VI. FACILITIES REQUIRED

Hardware Requirements:

• Hardware	: Processor Ryzen 5
• RAM size	: 8 GB
• Hard Disk capacity	: 512 GB
• Monitor type	: 15-inch color monitor

Software Requirements:

• Operating System	: Windows XP, Windows 7, Windows 8, Windows 11
• Internet connection	: Existing telephone lines, Data card.
• Browser	: Google chrome's latest version
• Database	: MySQL.
• Software	: Visual Studio 7.33.0

VII. RESULTS AND PERFORMANCE MEASUREMENTS

1. Operational Feasibility

The system keeps a record of vegetables and also the farmers' details who going to supply the vegetables and fruits to the company. This system keeps a record of how many vegetables and fruits are needed to supply. Shortage of fruits and the operation of the proposed system depend on its various users.

- (1) Admin
- (2) Customer User
- (3) Supplier user

Admin will View registered users- Farmers and Customers, add and list vegetables, view and update payments, list employee, list payments, List upcoming vegetables, List vegetable stock, list demands of suppliers. Track supply transport, list damage of vegetables. Reset password, Log-out for new participated.

Customer satisfaction is necessary as from that we can sell more stock and business will be in profit and also listen to the customers complaints. And provide services as much as we can.

2. Technical Feasibility

The website will be developed using the Xampp server, MySQL, HTML, JavaScript, CSS, and PHP.

3. Economic Feasibility

Transportation costs will be reduced by using this website. The supplier will know where the vegetables are needed.in how much quantity customers want.

The wastage of vegetables will be reduced. And the customer will get fresh vegetables.

VIII. CONCLUSION

The E-Shop Fruits and Vegetable Store is an efficient and effective solution for managing business operations and providing quality service to customers.

The online store offers a wide range of benefits for customers, including convenience, variety, competitive pricing, personalized recommendations, and a fast and easy checkout process.
